Can a camera-centred scale change explain the withheld remainder?

Gray: withheld residual Blue: fitted camera-radial component; same common-attitude convention

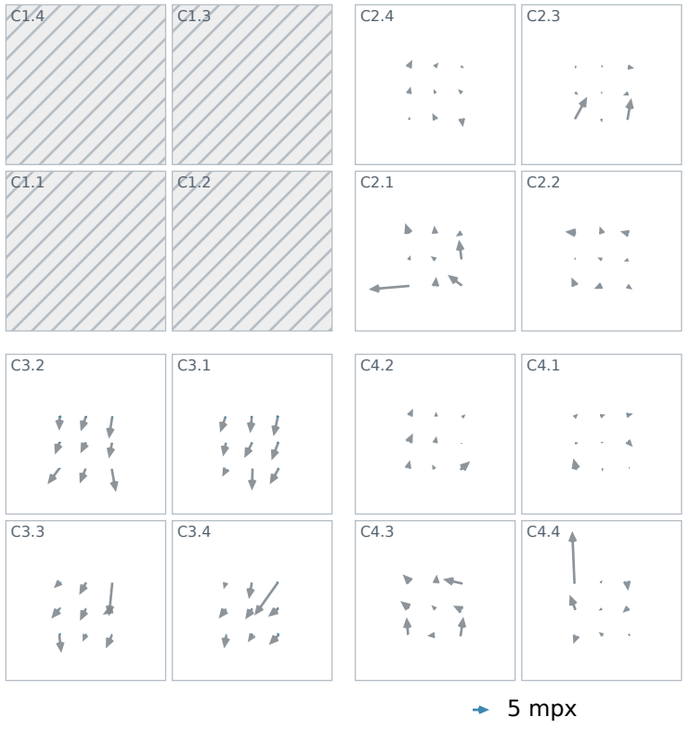

Orbit 47 — first: mean residual and radial component

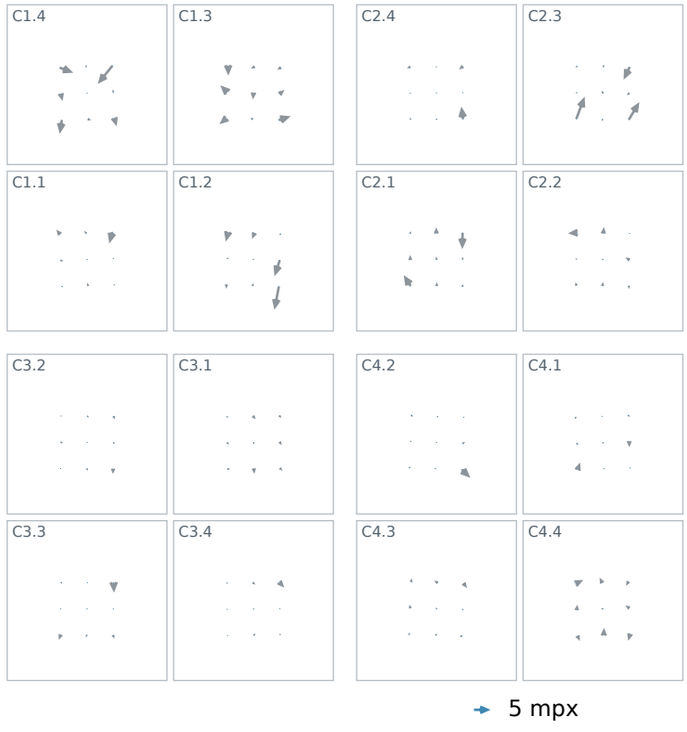

Orbit 47 — last: mean residual and radial component

Orbit 48 — first: mean residual and radial component

Orbit 48 — last: mean residual and radial component

One radial scale coefficient per camera and exposure; no thermal refit. Descriptive projection, not a new forecast or unique physical explanation.
